

PART-A

- 1.List the types of automation.
- 2.Define IACS based on ANSI / ISA Standard.
- 3.Define authentication and authorization of information system security.
- 4.Show the threat matrix of information system security technology.
- 5.List the applications of automation.
- 6.Define safety instrumented systems based on ANSI / ISA Standard.
- 7.Define confidentiality and integrity of information system security.
- 8.Define firewall based on NIST Standard.
- 9.State the Advantages and Dis-advantages of automation.
- 10.What are the steps involved in automation installation?
- 11.Define availability and accountability of Information system security.
- 12.List the types of control to mitigate the effect of cyber-attack.

PART-B

- 1.Describe the structure of Safety Instrumented Systems(SISs) of IACS with neat sketch.
- 2.Summarize the issues in IACS Security.
- 3.Illustrate different types of cryptography technologies used in information system security with neat sketch.
- 4.Illustrate the concept of digital signature and Virtual Private Network (VPN) with neat sketch.
- 5.Explain the block diagram of SCADA and DCS with neat sketch.
- 6.Summarize the industrial automation and control system protocols.
- 7.Classify the malicious code and types of cyber-attacks against information systems and IACS.
- 7(b).Outline the additional system security concepts in IT systems and IACS.
- 8.Illustrate the different types of firewalls used in information system security with neat sketch.
- 9.Outline the terminologies of Information System Security.
