CHAPTER 1 Industrial Automation	1
1.1 Introduction	1
1.2 Innovators	4
1.3 Industrial revolutions	10
1.4 Evolution of automation from needs perspectives	11
1.5 Evolution of automation from technology perspectives	11
1.6 Challenges three decades back	12
1.7 Current challenges	13
1.8 Technology trends	13
1.9 Device connectivity	18
1.10 Automation system controllers	22
1.11 The generic duties of an automation system in hierarchical form	27
1.12 Functional requirements of an integrated information and automation systems: A generic list	27
1.13 Conceptual/functional topology of an automation system	33
 CHAPTER 2 The Programmable Logic Controller	 37
2.1 Introduction to the programmable logic controller	37
2.2 Hardware	38
2.3 Internal architecture	39
2.4 I/O devices	42
2.5 I/O processing	48
2.6 Ladder and function block programming	52
2.7 Function blocks	61
2.8 IL, SFC, and ST programming methods	65
 CHAPTER 3 Distributed Control System	 75
3.1 Introduction	75
3.2 Evolution of traditional control systems	76
3.3 Distributed control systems	81
3.4 Functional components of DCS	88
3.5 Diagnostics in IOs	99
3.6 Controllers	101
3.7 Workstations	108
3.8 Functional features of DCS	111
 CHAPTER 4 Batch Automation Systems	 135
4.1 Introduction	135

CHAPTER 5 Functional Safety and Safety Instrumented Systems	157
5.1 Functional safety: an introduction	157
5.2 What is functional safety?	157
5.3 Safety functions and safety-related systems	157
5.4 Example of functional safety	158
5.5 Legislation and standards	159
5.6 IEC 61508/IEC 61511: an introduction	160
5.7 Scope of the standard	162
5.8 The overall safety life cycle (SLS)	164
5.9 Risk and its analysis and reduction	165
5.10 Safety requirements and safety functions	166
5.11 Safety integrity levels (SIL)	167
5.12 Functional safety management	169
5.13 Layers of protection	170
5.14 Risk analysis techniques	171
5.15 Safety requirement specifications	176
5.16 General requirements	178
5.17 Response time	178
5.18 SIF specification	179
5.19 Operator interfaces (HMI)	185
5.20 Safety instrumented systems	186
5.21 Reliability and diagnostics	189
5.22 SIS voting principles and methods	194
5.23 SIS SIL level calculation tools	200
5.24 SIS communication protocols and field-buses	200
5.25 FF-SIS: foundation fieldbus for safety instrumented systems	201
5.26 PROFIsafe	204
5.27 PROFIsafe protocol	207
5.28 Black channel principle	207
5.29 Integrated safety data communications	208
5.30 Selection of safety instrumented system	209
 CHAPTER 6 Fire and Gas Detection System	 217
6.1 Introduction to the fire and gas (F&G) detection system	217
6.2 Understanding industry safety performance standards	219
6.3 Critical components	220
6.4 F&G detectors	221
6.5 F&G network architecture	226
6.6 Integrated approach for F&G	232
6.7 Conclusion	235
 CHAPTER 7 SCADA Systems	 237
7.1 Overview of SCADA systems	237
7.2 Minicomputers and microprocessors	241

7.3 Remote terminal units	248
7.4 Communication technologies	264
7.5 Program development tools	275
7.6 Operator interface	278
CHAPTER 8 Programmable Automation Controller	301
8.1 Modern industrial application	301
CHAPTER 9 Serial Communications	307
9.1 RS232 overview	307
9.2 RS232 signal information	307
9.3 Limitations of RS232 applications	320
9.4 Overview of EIA-485	321
9.5 The difference between RS232/RS485/RS422	325
9.6 Modbus serial communications	327
9.7 Modbus map	335
9.8 Error checking methods	336
9.9 Modbus exception codes	337
CHAPTER 10 Industrial Networks	341
10.1 Introduction to industrial networks	341
10.2 The OSI network model	342
10.3 TCP/IP	344
CHAPTER 11 HART Communication	365
11.1 Introduction	365
11.2 Technology	365
11.3 HART technology	369
11.4 Application environment	370
CHAPTER 12 PROFIBUS Communication	381
12.1 Overview	381
12.2 Supported topology	386
12.3 Data exchange	388
12.4 Fail-safe operation	391
CHAPTER 13 Foundation Fieldbus Communication	401
13.1 Fieldbus technology	401
CHAPTER 14 Wireless Communication	417
14.1 Introduction	417
14.2 Basic concepts of industrial wireless communication	419
14.3 ISA100 standard	426
14.4 Networks	439
14.5 Network configurations	443

14.6 Gateway, system manager, and security manager	447
14.7 Applications of wireless instrumentation	451
14.8 Designing and engineering a wireless system	455
CHAPTER 15 OPC Communications	459
15.1 Introduction	459
CHAPTER 16 Asset Management Systems	479
16.1 Definition of an asset	479
16.2 Asset management system	479
16.3 Key goal of asset management system	480
16.4 Fault models	482
16.5 Calculation model	483
16.6 Maintaining work processes	486
16.7 Unneeded trips to the field - avoided through remote diagnostics	488
16.8 Life cycle work processes	489
16.9 Intelligent field devices - data flow	491
16.10 Integrated asset management	492
16.11 Use of the tools	493
16.12 Instrument asset management systems - architecture/subsystems	494
16.13 Smart field devices	496
16.14 Asset management system: role-based diagnostics	496
16.15 Device rendering technologies	498
16.16 Limitations of DD technology	501
16.17 Enhanced device description language	501
16.18 FDT/DTM	504
16.19 The DTM	504
16.20 Key benefits to the users	505
CHAPTER 17 Calibration Management Systems	507
17.1 Introduction	507
17.2 Need for calibration	507
17.3 Traceability	508
17.4 Calibration standards	508
17.5 Calibration concepts	510
17.6 Documentation	511
17.7 Calibration of transmitters	511
17.8 Calibrating a conventional instrument	515
17.9 Calibrating a HART instrument	516
17.10 Calibrating fieldbus transmitters	517
17.11 Calibration management system	518
17.12 Calibration software	520
17.13 Benefits of using calibration management system	521
17.14 Business benefits	522

CHAPTER 18 System Maintenance	523
18.1 Overview	523
18.2 Distributed control system maintenance	524
18.3 Maintenance software	526
18.4 Maintenance program implementation and management	526
18.5 Software and network maintenance	532
18.6 Computer operating environment	532
18.7 Network maintenance	539
 CHAPTER 19 Advanced Process Control Systems	 547
19.1 Introduction and need for advanced process control (APC)	547
19.2 History of process control	547
19.3 Advanced process control	549
19.4 Advantages of APC	553
19.5 Architecture and technologies	553
 CHAPTER 20 Training System	 559
20.1 Introduction to process modeling	559
20.2 Training systems	562
20.3 Components of training simulators system	563
20.4 Architecture of a typical training simulators	565
 CHAPTER 21 Alarm Management Systems	 569
21.1 Introduction	569
21.2 Conventional and advanced alarm systems	570
 CHAPTER 22 Database Systems	 583
22.1 Historian database	583
 CHAPTER 23 Manufacturing Execution Systems	 593
23.1 Introduction	593
 CHAPTER 24 Cyber Security in Industrial Automation	
24.1 Plant control network	
24.2 Cyber attacks	
24.3 Understanding common PCS vulnerabilities	
24.4 Common PCS software security weaknesses	
24.5 Standards	
 CHAPTER 25 Mobile and Video Systems	
25.1 Introduction	
25.2 Mobile process monitoring console	
25.3 Key benefits of wireless process mobile console	
25.4 Handheld mobile device solutions	
25.5 Some of the major benefits of field-based mobility solutions	

- 25.6 Mobile device based solutions
- 25.7 Video system analytics
- 25.8 Regions of interest
- 25.9 Minimum object size
- 25.10 Video system camera server
- 25.11 DCS
- 25.12 Operator console
- 25.13 Video system client
