|-----------------------------------------|------------------------------------------------------------------------------|
| <b>Course Learning Rationale (CLR):</b> | <b>The purpose of learning this course is to:</b>                            |
| <b>CLR-1:</b>                           | Understand the different methodologies involved in research studies          |
| <b>CLR-2:</b>                           | Familiarize with various types of academic writing and presentations         |
| <b>CLR-3:</b>                           | Understand the significance of ethics in academic publications               |
| <b>CLR-4:</b>                           | Familiarize with different design of experiments and optimization techniques |
| <b>CLR-5:</b>                           | Familiarize with approaches of analysing data                                |

| <b>Course Outcomes (CO):</b> | <b>At the end of this course, learners will be able to:</b>                            | <b>Programme Outcomes (PO)</b> |          |          |
|------------------------------|----------------------------------------------------------------------------------------|--------------------------------|----------|----------|
|                              |                                                                                        | <b>1</b>                       | <b>2</b> | <b>3</b> |
| <b>CO-1:</b>                 | Acquire knowledge on basic research methodology                                        | 3                              | 3        | -        |
| <b>CO-2:</b>                 | Write and present research contents                                                    | 3                              | 3        | -        |
| <b>CO-3:</b>                 | Recognise the values and ethic involved in scientific research                         | 3                              | 3        | -        |
| <b>CO-4:</b>                 | Apply different approaches for solving design of experiments and optimization problems | 3                              | 2        | -        |
| <b>CO-5:</b>                 | Analyse the applications of statistical and machine learning tools for data analysis   | 3                              | 2        | -        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                 |

| <b>Module-1 – RESEARCH PREPARATION, PLANNING AND RESOURCES</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>16 Hours</b> |
| Research – objectives, definitions – knowledge economy; Perspectives of stakeholders; Types of research; Critical & creative thinking; Generating research topic; Identifying broad research question and objectives – design of questionnaire; Characteristics of a good research – research design; Methods of scientific enquiry – theoretical, experimental and empirical; Hypothesis – formulation & testing. Sources of information – ICT enabled tools; Databases, repositories, public and private sources, indexes; Literature search – keyword; Backward and forward search; Quality measurement tools: journal metrics, author-level metrics; Meta-analysis of research findings; Literature review: grouping, analysing & comparison: Identification of research Methods; Intellectual Property Rights; Copyright – patent –geographical indication – industrial designs – technology transfer.<br>PRACTICE: Identifying research topic and formulation of Research Statement; Conduction of literature review. |                 |
| <b>Module-2 – ACADEMIC WRITING AND PRESENTATIONS</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>14 Hours</b> |
| Preparation of project proposal for funding – Identification of funding agencies; Project proposals structure; Research report writing; Data visualization; Communication model – audience analysis; Identification of suitable journal; Conference presentation types: Oral, poster – difference in audience interaction – guideline for effective presentation; Synopsis – thesis – extended abstract – graphical and video abstract – short communications; Referencing – style – tools for referencing; Thesis writing: structure – preliminary pages, main body, references; Evaluation of Thesis – examiner reports – Oral defence.<br>PRACTICE: Writing abstract and conclusion; Referencing in different styles.                                                                                                                                                                                                                                                                                                    |                 |
| <b>Module-3 – PUBLICATION ETHICS AND MISCONDUCTS</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>12 Hours</b> |

Ethics: definition; Ethics with respect to science and research - intellectual honesty and research integrity; Scientific misconducts: Falsification, Fabrication and Plagiarism (FFP); Redundant publications: duplicate and overlapping publications, salami slicing; Selective reporting and misrepresentation of data; Publication ethics: introduction and importance; Standards setting initiatives and guidelines: COPE, WAME; Conflicts of interest. Publication misconduct: definition, concept, unethical behaviour; Violation of publication ethics, authorship and contributor ship; Identification, complaints and appeals; Predatory publisher and journals.

PRACTICE: Plagiarism checking and rectification.

#### Module-4 – DESIGN OF EXPERIMENTS AND OPTIMIZATION METHODS

16 Hours

Design of experiments; Basic experimental designs; Completely randomized design; Randomized block design; Latin square design; Full factorial design -  $2^2$ ,  $2^3$  and  $2^k$ ; Fractional factorial designs; Taguchi methodology – Orthogonal array; S/N ratio – Taguchi method for optimization; Response surface method – multi response optimization. Global optimization techniques – evolutionary and swarm algorithms – examples and case studies.

PRACTICE: Design of experiment – Taguchi method – Response surface method.

#### Module-5 – DATA ANALYSIS

17 Hours

Basic probability distributions – Normal distribution – Binominal and Poisson distributions – Weibull and exponential distributions; Sampling: types - size, Sampling tests: T-test – F-test –  $\chi^2$  test; Modelling – validation and verification; Simulation – techniques; ANOVA; Correlation analyses: Pearson and Spearman Correlations; Regression, classification and cluster analyses; Factor analysis; Discriminant analysis; Uncertainty and error analyses; Machine learning: supervised and unsupervised – examples and case studies.

PRACTICE: Distribution; Sampling; Machine learning tools.

|                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
