

Exercise 04:

Question:

Write the reference in all three styles.

The following paper needs to be cited in APA, IEEE, and MLA:

- Author: Sharma, R. & Gupta, A.
- Title: Advances in EV Charging Systems.
- Journal: International Journal of Power Electronics, Vol. 15, No. 2, pp. 101–120, 2024.

Solution:

1) Aim:

To study the specific formatting rules of APA, IEEE, and MLA citation styles and to apply them to a specific journal paper on Electrical Vehicle (EV) systems.

2) Description:

Citation and referencing constitute the foundation of academic integrity, enabling the validation of research claims and the traceability of intellectual property. In engineering and technical research, adherence to specific style guides is critical for publication and peer review. This exercise examines the structural logic of three primary citation paradigms:

- a) APA (American Psychological Association): An author-date system that prioritizes the recency of research, predominantly used in social and behavioral sciences.
- b) IEEE (Institute of Electrical and Electronics Engineers): A numeric indexing system designed for brevity and technical clarity, serving as the global standard for engineering and computer science fields.
- c) MLA (Modern Language Association): An author-page framework that emphasizes the "container" (source) of the work, common in humanities. The objective is to transpose raw bibliographic data into these standardized formats to demonstrate proficiency in scholarly communication.

3) Structural Specification and Formatting:

a) APA Style (American Psychological Association):

i) Key Features of the Style:

- 1) Author-Date System: The publication year is parenthesized immediately following the author list to emphasize currency.
- 2) Sentence Case Capitalization: Article titles utilize sentence case (capitalizing only the first word and proper nouns), whereas journal titles use title case.
- 3) Italicization: The journal name and volume number are italicized to denote the source container.
- 4) Ampersand Usage: An ampersand (&) connects multiple author names.
- 5) Implicit Labels: Volume and issue numbers are presented as 15(2) without explicit "vol." or "no." prefixes.

ii) Format:

Sharma, R., & Gupta, A. (2024). *Advances in EV charging systems*. *International Journal of Power Electronics*, 15(2), 101–120.

b) IEEE Style (Institute of Electrical and Electronics Engineers):

i) Key Features of the Style:

- 1) Numeric Indexing: Citations are identified by bracketed numbers (e.g., [1]) corresponding to their order of appearance in the text.
- 2) Author Initial Placement: Initials precede surnames (e.g., R. Sharma) to improve readability in technical lists.
- 3) Title Enclosure: Article titles are enclosed in double quotation marks, distinguishing them from the italicized journal name.
- 4) Explicit Abbreviations: Utilizes standard technical abbreviations: vol. for volume, no. for issue, and pp. for page ranges.
- 5) Chronological Placement: The publication year is positioned at the terminus of the reference entry.

ii) Format:

[1] R. Sharma and A. Gupta, "Advances in EV Charging Systems," *International Journal of Power Electronics*, vol. 15, no. 2, pp. 101–120, 2024.

c) MLA Style (Modern Language Association):

i) Key Features of the Style:

- 1) Container-Based Format: Focuses on the "Container" (Journal) and the location of the work within it.
- 2) Title Case Capitalization: Both the article title and the journal name are capitalized in standard Title Case.
- 3) Punctuation Logic: Periods are used to separate the author and title, while commas separate the journal metadata.
- 4) Date Positioning: The year of publication appears after the volume/issue information, preceding the page range.
- 5) Page Denotation: Explicitly uses the abbreviation pp. to indicate the page range.

ii) Format:

Sharma, R., and A. Gupta. "Advances in EV Charging Systems." *International Journal of Power Electronics*, vol. 15, no. 2, 2024, pp. 101–120.

4) Inference:

The observation indicates that proper citation not only strengthens the credibility of research but also ensures that original authors receive appropriate acknowledgment. Although APA, IEEE, and MLA employ different formatting conventions, they all aim to preserve academic integrity and support transparent, ethical scholarship.
